

Product Profile

GCX True Bypass 8-Loop Rackmount Audio Switcher

PRODUCT OVERVIEW

The Voodoo Lab® GCX Guitar Audio Switcher provides total control over your pedals, rack effects, amp & channel switching and more. The 8 true bypass loops can be used for effect switching, A/B switching to select amps and preamps, or to control any type of footswitch function such as amp channel switching.

GCX loops have no active circuitry, and use the finest gold relays sealed in nitrogen, so your tone will stay pure and dynamic no matter what kind or how many effects are in use. Combine the GCX Guitar Audio Switcher with a Ground Control Pro to form a complete switching system that is the number one choice for touring and recording pros worldwide.
